Agenda Item 6

WFP/EB.A/2017/6-J/1

Resource, Financial and Budgetary Matters

**For consideration**

Executive Board documents are available on WFP's website (<http://executiveboard.wfp.org>).

---

## **Report on the Utilization of WFP's Advance Financing Mechanisms (1 January–31 December 2016)**

### **Draft decision\***

The Board takes note of “Report on the Utilization of WFP's Advance Financing Mechanisms (1 January–31 December 2016)” (WFP/EB.A/2017/6-J/1) and looks forward to updates on the macro-advance financing model in 2017.

### **Introduction**

1. WFP's funding comes entirely from voluntary contributions, which are used to provide timely deliveries of food to the people it serves. The timing of delivery is critical in ensuring that the people most in need – the most vulnerable, particularly women and children – are given assistance when they need it. The early provision of financial resources to projects, in the form of either immediate funding allocations or spending authority, allows more rapid implementation of project activities.
2. This paper reports on the use of resources for advance financing in 2016, directed to serve three distinct purposes: release of funds to projects; food purchase prior to requests from projects; and corporate services.

---

\* This is a draft decision. For the final decision adopted by the Board, please refer to the Decisions and Recommendations document issued at the end of the session.

## Advance Financing for Release of Funds to Projects

3. Three mechanisms were deployed in 2016 to provide advance financing or spending authority for projects:
- Internal project lending (IPL).*<sup>1</sup> This mechanism allows advance financing to be provided to projects if suitable collateral exists in the form of forecast contributions. In 2014, the Executive Board approved a ceiling of USD 570 million for this facility, leveraging the operational reserve at a ratio of 6:1. The forecasts providing the collateral are rated as high, medium or low probability, and loans can be made of up to an average of 80 percent of all categories of forecast contributions.<sup>2</sup> When the forecast contribution is received, the advance is repaid.
  - Macro-advance financing.* This mechanism is similar to IPL, but advances are made based on less-specific funding forecasts rather than the existence of collateral. It was employed for the first time in 2016 through seven pilot projects in five countries.
  - The Immediate Response Account (IRA).* The IRA enables WFP to finance specific activities in emergencies. It is a multi-year and multilateral funding facility that provides immediate financial assistance on a 1:1 leverage basis in the absence of collateral – when there is no recourse to IPL. The IRA is replenished by direct donor contributions (Annex I). Allocations can also be revolved when a project allocation is reimbursed from donor contributions made directly to the project. The IRA target level was increased from USD 70 million to USD 200 million from 2015.<sup>3</sup>
4. Figure 1 illustrates the process used for deciding whether to deploy IPL or the IRA.

**Figure 1: Decision process for deploying IPL or the IRA**

<sup>3</sup> WFP/EB.2/2014/5-A/1, paragraphs 9–11.

### Use of Internal Project Lending in 2016

5. IPL can be used to support projects for which receipt of contributions has been formally forecast. Table 1 shows that a record number of IPL advances (179) were made during 2016. These advances, exceeding USD 1 billion in total, were made to 68 operations, with 54.6 percent going to emergency operations (EMOPs), 39.5 percent to protracted relief and recovery operations (PRROs), 1.7 percent to development projects and country programmes, and 4.2 percent to special operations.

<b>TABLE 1: ADVANCE FINANCING LOANS, 2004–2016</b>			
<b>Year</b>	<b>Number of loans</b>	<b>Amount advanced (USD million)</b>	<b>Average loan amount (USD million)</b>
2004	5	27.1	5.4
2005	10	154.5	15.5
2006	4	36.8	9.2
2007	21	157.3	7.5
2008	58	324.6	5.6
2009	35	227.1	6.5
2010	62	427.3	6.9
2011	64	439.1	6.9
2012	120	636.1	5.3
2013	132	675.2	5.1
2014	161	1 092.8	6.8
2015	157	777.5	5.0
2016	179	1 072.4	6.0
<b>All years</b>	<b>1 008</b>	<b>6 047.8</b>	<b>6.0</b>

6. The value of advances made in 2016 increased by USD 294.9 million – 38 percent – from 2015. The largest advances were provided to WFP’s operations in the Syrian Arab Republic and the Syrian region (USD 351.6 million), Ethiopia (USD 127 million), South Sudan (USD 92 million), West Africa (USD 81 million), Malawi (USD 72 million) and Iraq (USD 61 million). Together, these operations received 80 advances, 45 percent of all advances made during the year, and accounting for 76 percent, in value, of all IPL advances. The most significant reduction during the year occurred in Yemen, where the amount advanced through IPL fell from USD 72 million in 2015 to USD 34 million in 2016.

**Syrian Arab Republic**

An IPL advance of USD 93.8 million in March 2016 – part of a larger advance of USD 116 million – enabled the country office to cover imminent shortfalls projected for June 2016 and to build up in-country stocks, allowing the provision of a stable food basket and the distribution of nearly full general food baskets from May 2016 onwards. The level of available stocks gradually reached nearly two months of requirements for the first time in the operation, providing buffer stocks against potential supply disruptions.

On 12 July, the USD 55 million – excluding indirect support costs – advanced to the operation was particularly helpful in preventing a pipeline break anticipated for October 2016. It also ensured that the general food basket distributed was as close as possible to planned, and that supplies were sustained until the end of the year. The advance enabled the supply chain for the Syrian EMOP to remain at an optimal level, with two months of stocks available in country and requirements for another month in transit. The food items procured with the advance contribution were packaged in the Syrian Arab Republic and included crucial commodities such as rice, vegetable oil and sugar, which are essential to the Syrian diet and have longer lead times.

**Ethiopia**

In 2015 and 2016, Ethiopia experienced one of its worst droughts in more than 30 years. As the humanitarian community responded to this emergency, the rate of donor contributions did not keep up with changing needs. In January 2016, when the pipeline was facing substantial shortfalls and a complete pipeline break was anticipated by March, the country office submitted an advance financing request for nearly USD 54 million against forecast donor contributions. This financing was intended to complement the Government's efforts to meet the needs of 7.6 million beneficiaries. The advance was made in full, with spending authority delegated to the country office within one week. Taking advantage of stocks already in the Global Commodity Management Facility (GCMF) inventory, the country office purchased 47,300 mt of food, assisting more than 2.3 million beneficiaries – particularly in the Somali region – in days rather than months. The forecast contributions were confirmed in late January and mid-May, and the advance was promptly repaid.

As the year progressed, government-led efforts to manage the crisis were challenged by dwindling resources. A new advance of USD 62 million was submitted at the end of April to cover shortfalls from May to August. The performance of Purchase-for-Progress cooperatives was exceptional, making 40,000 mt of maize available for purchase as soon as the advance request was approved. This, combined with international purchases of wheat, allowed the country office to provide more than 111,600 mt to meet the needs of 6 million beneficiaries with full rations until August 2016.

**Macro-Advance Financing Pilots in 2016 and Proposals for 2017**

7. Macro-advance financing (MAF) is an extension of IPL. It provides budget authority to country offices even before traditional advance financing can be provided to projects through the existence of suitable collateral in the form of forecasted contributions. MAF therefore has the potential to reduce further the effects of fragmented funding streams, increase the predictability of resources, and maximize efficiency and effectiveness. In 2015, the Executive Board was informed of the plan to pilot MAF in 2016, with an upper limit of between USD 150 million and USD 200 million set aside from the IPL ceiling.<sup>4</sup>

---

<sup>4</sup> WFP/EB.2/2015/5-C/1.

8. Unlike IPL, MAF advances are not directly linked to specific contribution forecasts as collateral. MAF advances instead rely on the level of resources that a country office may reasonably expect based on past contribution trends and an assessment of the likely funding intentions of donors.
9. Table 2 shows the country offices participating in MAF pilots and the financial status of the 2016 pilots as of April 2017.

<b>Country</b>	<b>Project</b>	<b>2016 needs-based plan</b>	<b>2016 resource-based plan</b>	<b>MAF released</b>	<b>MAF advance repaid</b>
		<i>USD million</i>			
Ethiopia	PRRO 200700	163	97	42.1	42.1
Kenya	PRRO 200737	118	89	11.5	11.5
Kenya	PRRO 200736	114	65	8.3	8.3
Kenya	Country programme 200680	30	27	9.5	8.5
Mali	PRRO 200719	106	73	15.0	15.0
Nicaragua	Country programme 200434	9.9	7.5	1.3	0.9
Sudan	PRRO 200808	347	270	13.0	13.0
<b>Total</b>				<b>100.7</b>	<b>99.3</b>

10. In support of management's decision to review the progress of the MAF pilots, in March and April, the Boston Consulting Group undertook an external assessment of MAF to date to review progress in the MAF pilots. The assessment included field visits to Kenya and Ethiopia, focusing on the results of using MAF and the efforts required to generate these results.

### **Results Generated by MAF**

11. The value proposition for MAF was grounded on a value-for-money hypothesis. It anticipated that more predictable funding would lead to more effective and sustainable results, improve project management, or open up possibilities for cost savings, for example by taking advantage of seasonal commodity prices. Building on the anticipated benefits of MAF, the assessment noted a number of positive impacts, and some drawbacks, which need to be considered in determining the future direction of MAF.

### **Positive Results**

12. The MAF assessment highlighted two major positive impacts: mitigation of pipeline breaks and ration cuts and taking advantage of commodity prices.
13. *Mitigation of pipeline breaks and ration cuts.* An MAF advance provides spending authority earlier in a project's life cycle than IPL. This facilitates pipeline planning through the earlier visibility of funding availability, leading to reductions in pipeline breaks and ration cuts.
14. In Ethiopia, PRRO 200700 "Food Assistance for Eritrean, South Sudanese, Sudanese and Somali Refugees" received MAF totalling USD 42.1 million in two tranches in January and May 2016, which were used to procure 54,838 mt of food, principally wheat, for general food distribution. From February to August 2016, WFP was able to reach more than 90 percent of its planned beneficiaries – approximately 500,000 people – each month. Contributions used to refinance the first MAF tranche were forecast in February and March. The contribution that financed the second tranche was confirmed in July without being previously forecast. MAF has therefore provided time savings of up to two months more than traditional IPL. The greater funding predictability provided by MAF has enabled steadier provision of support to beneficiaries over time.

15. *Taking advantage of commodity prices.* By providing spending authority earlier in a project's life cycle, MAF generates greater possibilities for cost savings by expanding the period during which procurement can take place.
16. In Mali, using part of the MAF advance of USD 15 million, food was procured in March and April 2016 at an average rate of USD 310 per ton, compared with the average USD 370 per ton that would have applied if the food had been procured when contributions were forecast and the operation was eligible for IPL. This generated savings of USD 900,000 through MAF.
17. The provision of MAF to the Kenya country programme allowed the country office to integrate the resources into GCMF demand planning. Maize was procured locally through the GCMF during the harvest season, when prices were lower. With MAF, the country office was able to procure maize through the GCMF at 12 percent less than it would have cost through IPL. As a result, the country programme saved USD 85,000.

### **Challenges**

18. The assessment also noted a number of internal and external constraints that hindered optimal implementation of the MAF model.

### **External Constraints**

19. MAF provides earlier spending authority to WFP operations than IPL. Including MAF advances in resource-based plans can make pipelines appear healthier in terms of transfer value or transfer cost. This masks the reality that MAF is not a concrete contribution to an operation; resources still have to be mobilized to provide replacement funding for the MAF. It is not clear that this is well understood, which may lead to MAF advances remaining unfinanced.
20. The MAF model relies on the receipt of contributions to allow the refinancing of MAF advances, matching donor contributions to a project. However, the existence of any donor conditions mean that refinancing can be time-consuming: every contribution received in an MAF pilot project has to be scrutinized to establish whether the conditions attached to the contribution allow it to be used for repayment of the MAF advance. Donor conditions also reduce the range of contributions that can be used to repay MAF. For the pilot projects, matching has been done largely through a manual process, which is possible when there are only seven pilot projects. If MAF is to be mainstreamed, some automation of the matching process will be necessary. If donor contributions continue to require review to determine whether they can be used to repay MAF, automation of the matching process will be more difficult, creating challenges for scale-up.
21. Issues causing repayment challenges include the following:
  - The programmatic level at which a donor contribution is confirmed determines its flexibility for refinancing an MAF advance. The more that contributions are directed towards specific activities, the less the flexibility to repay an MAF advance and the greater the risk of an advance remaining outstanding.
  - Some contributions are available to repay MAF activity undertaken after a certain date; any expenditures incurred before this date risk remaining unfinanced.
  - Contributions used for repayment of MAF do not provide the same options for donor visibility as those directed to IPL.

### **Internal Constraints**

22. The MAF process covers three steps: i) preparation and review of the funding forecast, which is also a prerequisite for resource-based plans; ii) a decision of the Strategic Resource Allocation Committee on any recommendation for MAF to ensure oversight during the pilot phase; and iii) final notification to the project team of MAF approval. The funding forecast requires extensive review of donor information as part of the risk assessment. As many benefits of MAF are derived from the early availability of funding, any delays arising from inefficient processes will dilute these benefits.

### Other Constraints

23. The MAF assessment noted that the involvement of WFP – at the Headquarters, regional bureau and country office levels – and donors requires a consistent approach to communication.
24. The assessment highlighted the need for WFP to improve communication guidance to prepare WFP staff for discussing MAF with donors. This should be achieved by providing technical guidance to enhance staff members' understanding of MAF and their capacity for outreach to the donor community. It should include information on the benefits demonstrated by the MAF pilots.
25. A review of contributions received for the MAF pilots noted donors' reactions, which varied between those who were generally supportive of MAF and those who, because of legislative or other constraints such as visibility, were unable to support MAF pilots with contributions. The assessment recommended that WFP engage with donor organizations – in capitals, through Rome-based representatives and at local missions – to ensure consistent messaging explaining MAF. This approach could also target donor counterparts engaged in decision-making on MAF to build a common understanding of the MAF workstream.

### Next Steps

26. A small number of projects are continuing as MAF pilots in 2017. As a result of the difficulties encountered in repaying MAF advances to the two country programmes included in the 2016 pilots, country programmes as a category have been excluded from consideration for MAF in 2017. The current financial status of projects receiving MAF advances in 2017 is shown in Table 3.

<b>TABLE 3: RESOURCE-BASED PLANS AND MAF, 2017 ADVANCES AS OF APRIL 2017</b>					
<b>Country</b>	<b>Project</b>	<b>2017 needs-based plan</b>	<b>2017 resource-based plan</b>	<b>MAF released</b>	<b>Repayment status</b>
<i>USD million</i>					
Ethiopia	PRRO 200700	163.2	100.7	20.0	0.0
Kenya	PRRO 200737	116.5	60.4	8.5	2.2
Mali	PRRO 200719	105.7	70.4	10.0	0.0
<b>Total</b>				<b>38.5</b>	<b>2.2</b>

27. Results generated from the 2016 MAF advances are very encouraging. The projects in which MAF has been deployed have identified tangible benefits for people served by WFP resulting from fewer pipeline breaks or smaller ration cuts, and from savings on procurement. Participating WFP operations are clearly benefiting from the increased predictability of spending authority provided through MAF.
28. If these benefits are scaled up through deployment of more widespread advances, they could result in even greater benefits to beneficiaries than have been realized in the MAF pilots or through IPL.
29. Any expansion of MAF must involve attention to the risk factors, which include the following:
  - If contributions received are earmarked for other activities, it may not be possible to repay advances made through MAF.
  - The repayment process requires a high level of manual intervention to match MAF expenditures with donor conditions. The effort required currently hinders MAF expansion.

30. Despite the challenges, the benefits of MAF are sufficient to support further investigation of the concept and engagement with donors. With support from the Boston Consulting Group, WFP will develop a model to support MAF expansion. This model will include an enhanced role for the Strategic Resource Allocation Committee and consideration of how “softly” earmarked resources can be used more strategically and efficiently to fund WFP activities. It will also consider the means for establishing a safety net for MAF, reflecting the role of the operational reserve in IPL when advances cannot be repaid.
31. WFP will consult the Executive Board during 2017 as the model is developed.

#### **Use of the Immediate Response Account in 2016**

32. The IRA was established in December 1991 to provide immediate assistance in emergencies. Allocations from this account (see Annex II) are made to operations requiring a rapid injection of resources in life-threatening situations when no contributions are forecast. Allocations may be made up to the balance of funds available in the account. If the project receives no contributions after receiving an IRA loan allocation – in which case the allocation cannot be revolved – the allocation may be converted to a grant.
33. A one-time transfer of USD 50 million was made in 2015 from the Programme Support and Administrative Equalization Account to create a minimum revolving lending capacity for emergencies.<sup>5</sup> Lending continues to be undertaken on a 1:1 leverage basis. In the same year, the annual target level of the IRA was increased to USD 200 million, to increase WFP’s ability to provide timely assistance in emergencies. Quarterly newsletters have been issued since mid-2015 to provide more visibility on use of the IRA.
34. In 2016, IRA income totalled USD 47.6 million, consistent with the average in recent years but far short of the target of USD 200 million established by the Board in 2015.

	<b>2009</b>	<b>2010</b>	<b>2011</b>	<b>2012</b>	<b>2013</b>	<b>2014</b>	<b>2015</b>	<b>2016</b>
New contributions	52.7	37.3	38.1	56.2	52.1	53.1	107.3	47.6
Allocations	136.6	151.9	161.9	126.1	165.3	182.0	164.2	215.2
Revolved funds	86.3	113	104.4	82.4	88.6	132.6	95.3	125.2

<sup>5</sup> An additional transfer of USD 15 million from the Programme Support and Administrative Equalization Account was made on 1 January 2017.

35. IRA allocations during 2016 totalled USD 215.2 million (Table 4). These funds were utilized for 15 PRROs, one special operation and 38 EMOPs, of which 15 were immediate-response EMOPs approved under the delegated authority of country directors, regional directors and the Director of Emergencies.
36. In 2016, the largest IRA allocations were made to EMOPs in West Africa and Yemen, both of which required significant allocations to address financing shortfalls when forecast contributions were not available to support IPL. Other large allocations were made to: i) Haiti, for emergency assistance and support in response to the impacts of Hurricane Matthew; ii) Madagascar, to cover the peak of the lean season from January to March 2017; iii) Somalia, to mitigate pipeline breaks and assist vulnerable populations throughout the lean season; iv) South Sudan, for scaling up relief operations in response to increasingly widespread food insecurity; and v) Uganda, to support refugees entering the country from South Sudan.
37. In 2016, 15 immediate-response EMOPs valued at USD 11.9 million were approved, compared with 13 totalling USD 12.3 million in 2015.

### **Somalia**

In 2016, WFP's country office in Somalia received USD 28 million from the IRA and USD 5 million from IPL. With these funds, WFP was able to purchase 14,469 mt of food from the GCMF, enabling rapid delivery of assistance. WFP also provided USD 7.9 million in cash-based transfers (CBTs) (e-vouchers) to vulnerable Somalis. The food and CBTs supported emergency relief, assistance for preventing and curing malnutrition, and livelihood activities, reaching 840,000 beneficiaries over three months. As Somalia was facing severe drought, this funding came at a critical time and covered significant shortfalls of food and CBTs. Without these resources, the country office's ability to mitigate major pipeline breaks and assist vulnerable Somalis affected by the drought would have been severely reduced.

### **Nigeria**

An October 2016 analysis by *Cadre Harmonisé* revealed a worrisome situation in northeast Nigeria, with the potential for deterioration in the following months. The epicentre of the crisis was in Borno and Yobe States, where insecurity and lack of access to land led to poor cereal production. Deteriorating food access was becoming an additional burden to most households in conflict zones. Of the 4.6 million people estimated to be food insecure, 55,000 were extremely food insecure and 1.8 million were in an emergency situation, requiring immediate food assistance until the end of 2016. The *Cadre Harmonisé* report also showed that the population was experiencing high malnutrition and mortality rates, with limited access to health facilities and humanitarian assistance.

In light of this situation and at the request of the Government, WFP needed to scale up its response in northeast Nigeria immediately. With USD 15 million from the IRA, the country office was able to expand its critical life-saving operations, rapidly covering the total requirements for general food distribution in January 2017 to reach 787,000 people in Borno and Yobe States, and providing additional resources towards meeting requirements from February onwards. Timeliness of these funds was critical in enabling WFP to deliver the required response and maximize the procurement of food.

Overall, WFP scaled up its operations from reaching 160,000 people in October to 1 million in December and more than 1 million from January onwards in conflict-affected zones of the northeast through CBTs, in-kind food assistance and distributions of specialized nutritious foods. Preliminary findings from March 2017 indicated that the number of severely food-insecure people in Borno and Yobe States had decreased in line with the scale-up of humanitarian assistance in recent months.

38. The IRA also supported emergency preparedness in 12 countries at a cost of USD 2 million. The impacts of El Niño created conditions in which the annual allocation limit of USD 2 million for emergency preparedness, set by the Board in 2004, was inadequate. The Secretariat's proposal for revising the annual limit for preparedness and related needs assessments to USD 6 million per year was approved by the Board in June 2016.
39. At the end of 2016, the IRA balance was USD 13.8 million compared with USD 59 million at the end of 2015. Outstanding advances made to projects but not yet repaid, or converted to grant, totalled USD 148.9 million at the year-end.

### **IRA Grants Made During 2016**

40. Thirty-five individual IRA allocations during 2015 and 2016 were provided as grants or converted into grants during 2016. These allocations totalled USD 44.8 million, including those made to immediate-response EMOPs and in support of preparedness activities.

### **Advance Financing for Food Purchase Prior to Requests from Projects**

41. The GCMF enables food purchases to be made in advance of requests from projects. It improves WFP's effectiveness by anticipating needs and resources and setting the supply process in motion early, enabling WFP to exploit favourable market conditions and reduce response times in emergencies. It is administered through a special account for purchasing food in advance of requests from projects.
42. WFP maintains food inventories for certain planning zones to reduce delivery lead times: the inventories are replenished according to aggregated demand and projected resources and shortfalls. Food is released to projects on receipt of confirmed contributions or advances from IPL or the IRA. Since its inception in 2008, the approved level of the GCMF has increased from USD 60 million to USD 350 million to provide for operations covering large areas and for more non-cereal foods.

### **2016 Highlights**

43. In 2016, the GCMF transferred 1.4 million mt of food to 42 country offices: this is the highest quantity ever delivered through the facility and represents a 61 percent increase compared with 2015, meaning that more beneficiaries benefited from reduced supply lead times. The GCMF accounted for 36 percent of the total volume distributed by WFP and 52 percent of all cash-funded purchases. In addition to minimizing lead times, the facility allowed WFP to meet its objective of purchasing more from developing countries. More than 40 percent of the commodities purchased through the GCMF during 2016 were sourced from local and regional markets in East, West and Southern Africa.
44. The average lead time for these purchases was 46 days – 52 percent fewer than through conventional procurement processes, exceeding the target of a 50 percent reduction. The average monthly inventory in WFP's pipelines during 2016 was 400,000 mt; this steady flow of supplies enabled WFP to meet operational requirements promptly. Unsold stocks at discharge ports were kept to a minimum level of 25,000 mt, minimizing the costs of prolonged storage.
45. In 2016, 766,000 mt of food was delivered to country offices in the East Africa supply line – a 26 percent increase in volume from 2015. The average lead time was 41 days compared with 99 days for commodities purchased through conventional methods
46. Following activation of the Level 3 response to El Niño in southern Africa, the GCMF ensured a steady supply line to countries affected by the emergency. The 301,000 mt of food purchased through the GCMF was significantly greater than the 40,000 mt purchased in 2015. The average lead time was 67 days compared with 106 days for conventional purchases.
47. Through the GCMF's West Africa supply line, 167,000 mt of food was delivered to country offices. The average lead time was 34 days compared with 90 days for conventional purchases. The GCMF was critical in ensuring a stable supply line in response to Nigeria's escalating emergency, with 14,000 mt of food transferred to the country office since April 2016.

## **Advance Financing for Corporate Services**

48. Following finalization of the Management Plan (2017–2019), in late 2016 the Global Vehicle Leasing Programme repaid part of the start-up funds it had received. With the expectation that no further advances would be required during 2017, the Addendum to the Management Plan<sup>6</sup> reduced the Global Vehicle Leasing Programme credit line to USD 15 million.
49. Eight advances totalling USD 12.8 million were made from the Capital Budgeting Facility to: i) support the Logistics Execution Support System (LESS), bringing the total advanced since 2013 to USD 33.1 million; ii) upgrade facilities at Garowe, Somalia; and iii) continue supporting the humanitarian logistics base in Djibouti. The roll-out of LESS was completed in 2016, with 83 countries online. By the end of 2016, USD 14.8 million had been recovered from projects in which LESS was operating, keeping the outstanding balance below the USD 20 million threshold approved for this Capital Budgeting Facility pilot scheme.
50. During the year, 18 other advances totalling USD 34.9 million were made for fee-for-service activities focusing on wellness, security, telecommunications and evaluations.
