

Strategic Results Framework (2008-2011)

First Regular Session of the EB
9 February 2009

Today's discussion

- Introduction
- Refinements to the Strategic Results Framework
- Challenges in parallel with the roll-out
- Roll-out at field level
- Next Steps

Introduction

- A core component of WFP's accountability framework
- Basis for aligning projects with the five Strategic Objectives – outcome and output-level indicators selected according to project objectives and used to measure results
- Informal Consultations in 2008

Refinements requested in December discussion

- Focus on nutritional status of women in emergencies (SO1)
- Modify Outcome 2.3 to include “risk” instead of “impact” (SO2)
- Capture IDPs and refugees in the post-conflict, post-disaster and transition contexts (SO3)
- Redefine asset categories (SO2, SO3, SO4)
- Apply cost-effectiveness in local procurement (SO5)

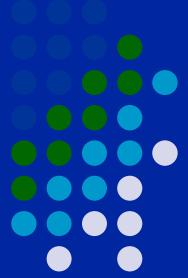

Challenges in parallel with the roll-out

- Testing new indicators and their feasibility in respective contexts, i.e.
 - MUAC for women of reproductive age (large sample required for pregnant women; project-specific)
 - Asset scores (capturing asset categories such as social/human assets)
 - Retention rate (pending agreement upon methodological standard; School Feeding policy)
- Capacity Development (SO5) – further discussions with the Cooperation and Partnership Programme based on conclusions of December 2008 workshop on capacity development and hand-over

Roll-out at field level

- Explanatory note sent in January 2009 on “how” to implement the Strategic Results Framework
- Project design is using the Framework in creating project log frames
- All projects should align with the Results Framework, enabling 2009 reporting based on the Strategic Plan (2008-2011)
- Corporate indicators laid out in the SRF form the core of the Indicator Compendium

Next Steps

- Support Regional Bureaux and Country Offices in using the SRF; refinements in case of concerns
- Include risk analysis of indicators
- Develop a Performance Measurement Strategy
- Consider “transition” to be part of the Framework

Thank you!
