

Case study:
**Country-level collaboration between
FAO, IFAD, and WFP**

Key messages from the synthesis report

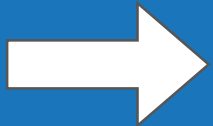

13 September 2019
Rome

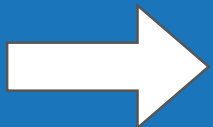

Presentation Overview

Background: the elaboration of the study

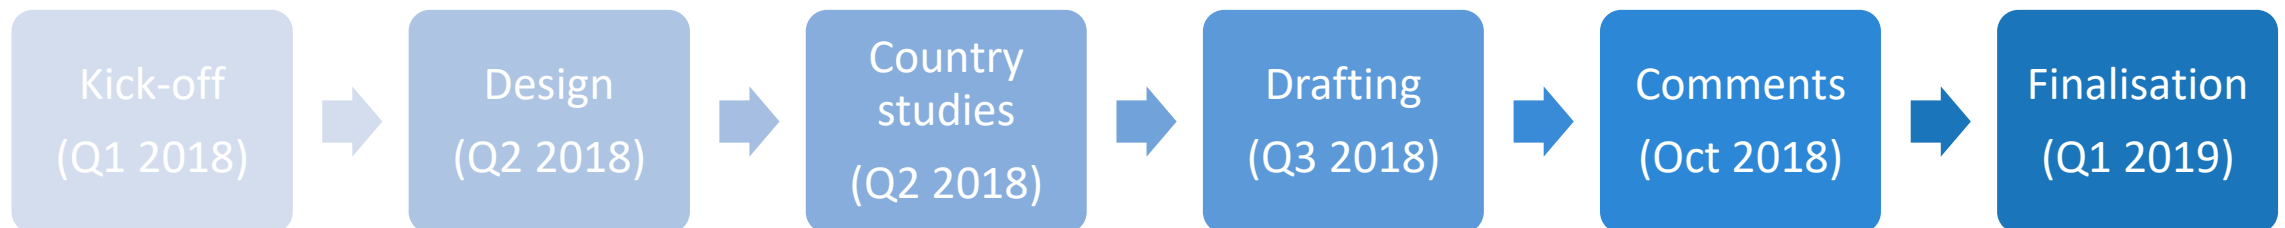

Key messages

Questions for discussion

- Focus on country level collaboration to complement (but not add to) corporate assessments of FAO, IFAD, and WFP
- Synthesis of four country studies: Bangladesh, Ethiopia, Jordan, Madagascar
- Emphasis on drivers / constraints for collaboration

Key messages

Collaboration is happening more at project than strategic level

Collaborative work is mostly driven by country needs in the context of the SDGs

There are important positive enablers of collaboration

Collaboration is held back by a lack of alignment of business processes

Fragmented funding flows and donors' work with individual agencies can be a constraint

Questions for discussion

1

What are the plans to increase strategic collaboration towards SDG2, and how do these fit within the broader UNDS reform?

2

How are the agencies envisaging to move towards increased harmonization and what role can members play to support the move?

3

How can members better incentivize collaboration on the ground?

Thank you.
